

Scotch-Brite Radial Bristle Discs

Scotch-Brite™ Radial Bristle Discsa new type of abrasive that is superior to sandpaper, flap wheels, or other types of sanders, brushes or abrasive wheels for many woodcarving and woodworking applications. Their flexible bristles can sand areas with detail, irregular, curved, or flat surfaces on soft or hard woods. Carvers can

remove the “fuzzies” without harming any of the underlying detail. The coarser grits can be used to carve and texture, while the finer grits will smooth, burnish, and polish. The 3M Cubitron™ and aluminum oxide grains embedded throughout the plastic bristles make them last much longer than conventional sanders.

Application	Color	Grit	Recommended Speed (RPM)
Remove material (cut, carve)	Brown, Green, Yellow	36, 50, and 80	500 - 3,000
Remove material less aggressively	White	120	500 – 3,000
Remove or set grain	Yellow	80	1,500 – 4,500
Clean up	White	120	3,500 – 5,000
Burnish	Blue, Red	400 and 220	3,500 – 5,000
